

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A recording apparatus comprising:
  - a first medium supply section that supplies a recording medium to be recorded;
  - a second medium supply section that supplies a recording medium to be recorded;
  - a first ~~recording section~~ print head that is provided in correspondence with the first medium supply section and that performs recording on the recording medium supplied by the first medium supply section; and
  - a second ~~recording-print head section~~ that is provided in correspondence with the second medium supply section and that performs recording on the recording medium supplied by the second medium supply section, the second print head being different from the first print head.
2. (currently amended): A recording apparatus according to claim 1 further comprising:
  - at least two controllers, each of said controllers being provide in one-to-one correspondence with one of said recording ~~sections~~ heads and for controlling the corresponding ~~recording-section~~ head.
3. (currently amended): A recording apparatus according to claim 1 further comprising:

at least two information generators, each of said information generators being provide in one-to-one correspondence with one of said recording ~~sections-heads~~ and for generating recording information for the corresponding recording ~~section head~~,  
wherein each said recording ~~section-head~~ performs recording based on the recording information.

4. (currently amended): A recording apparatus according to claim 1 wherein:  
said recording ~~sections-heads~~ perform recording on said recording medium supplied from the corresponding medium supply sections in the order in which said recording information is generated by said information generators corresponding to each of said recording ~~sections-heads~~.

5. (currently amended): A recording apparatus according to claim 1 wherein:  
each of said recording ~~sections-heads~~ is capable of performing recording in different recording modes.

6. (original): A recording apparatus according to claim 1 wherein:  
each of said medium supply sections comprises a driving section for driving the corresponding medium supply section; and  
when supplying a recording medium that is arranged across at least two of said medium supply sections, the driving sections of those medium supply sections across which the recording medium is arranged operate together to supply the recording medium.

7. (original): A recording apparatus according to claim 1 wherein:  
each of said medium supply sections comprises  
a supply section for supplying the recording medium, and  
a driving section for driving that supply section; and  
when supplying a recording medium that is arranged across the supply sections of at least two of said medium supply sections, the supply sections across which the recording medium is arranged are driven by the driving section for driving one of those supply sections.

8. (original): A recording apparatus according to claim 7 wherein:  
each of said medium supply sections comprises a driving force blocking section that blocks a transmission path for transmitting driving force caused by said driving sections; and  
when supplying a recording medium with one of the supply sections across which the recording medium is arranged, the driving force blocking section of the medium supply section including the other supply section blocks the transmission path for transmitting the driving force caused by the driving section of that medium supply section.

9. (currently amended): A recording apparatus according to claim 1 wherein:  
each of said recording ~~sections-heads~~ has a recording portion row in which a plurality of recording portions are arranged in a row with equal pitch in a supply direction in which the recording medium is supplied; and

as for two said recording ~~sections~~ heads that are arranged next to each other in a direction orthogonal to said supply direction, a distance between the rearmost recording portion, in said supply direction, of the recording portion row of one of the two recording ~~sections~~ heads and the foremost recording portion, in said supply direction, of the recording portion row of the other of the two recording ~~sections~~ heads is equal to said pitch.

10. (canceled).

11. (currently amended): A computer-readable storage medium having recorded thereon a computer program for a recording apparatus comprising:

a first medium supply section that supplies a recording medium to be recorded;  
a second medium supply section that supplies a recording medium to be recorded;  
a first ~~recording section~~ print head that is provided in correspondence with the first medium supply section and that performs recording on the recording medium supplied by the first medium supply section; and  
a second ~~recording-print head section~~ that is provided in correspondence with the second medium supply section and that performs recording on the recording medium supplied by the second medium supply section, the second print head being different from the first print head.

the computer program causing said recording apparatus to realizing a function of making each of said recording ~~sections-heads~~ record on said recording medium supplied from each of the corresponding medium supply sections.

12. (currently amended): A computer system comprising:

a computer; and

a recording apparatus connected to said computer and including:

a first medium supply section that supplies a recording medium to be recorded;

a second medium supply section that supplies a recording medium to be recorded;

a first ~~recording section~~ print head that is provided in correspondence with the first medium supply section and that performs recording on the recording medium supplied by the first medium supply section; and

a second ~~recording print head section~~ that is provided in correspondence with the second medium supply section and that performs recording on the recording medium supplied by the second medium supply section, the second print head being different from the first print head.

13. (currently amended): A method for performing recording with a recording apparatus including:

a first medium supply section that supplies a recording medium to be recorded;

a second medium supply section that supplies a recording medium to be recorded;

a first ~~recording section print head~~ that is provided in correspondence with the first medium supply section and that performs recording on the recording medium supplied by the first medium supply section; and

a second ~~recording print head section~~ that is provided in correspondence with the second medium supply section and that performs recording on the recording medium supplied by the second medium supply section, the second print head being different from the first print head,

the method comprising:

~~a step of~~ supplying said recording medium to said recording ~~sections~~ heads from the corresponding medium supply sections; and

~~a step of~~ recording with ~~said those recording sections~~ heads on the supplied recording medium.
